Wiring diagram of connection macros

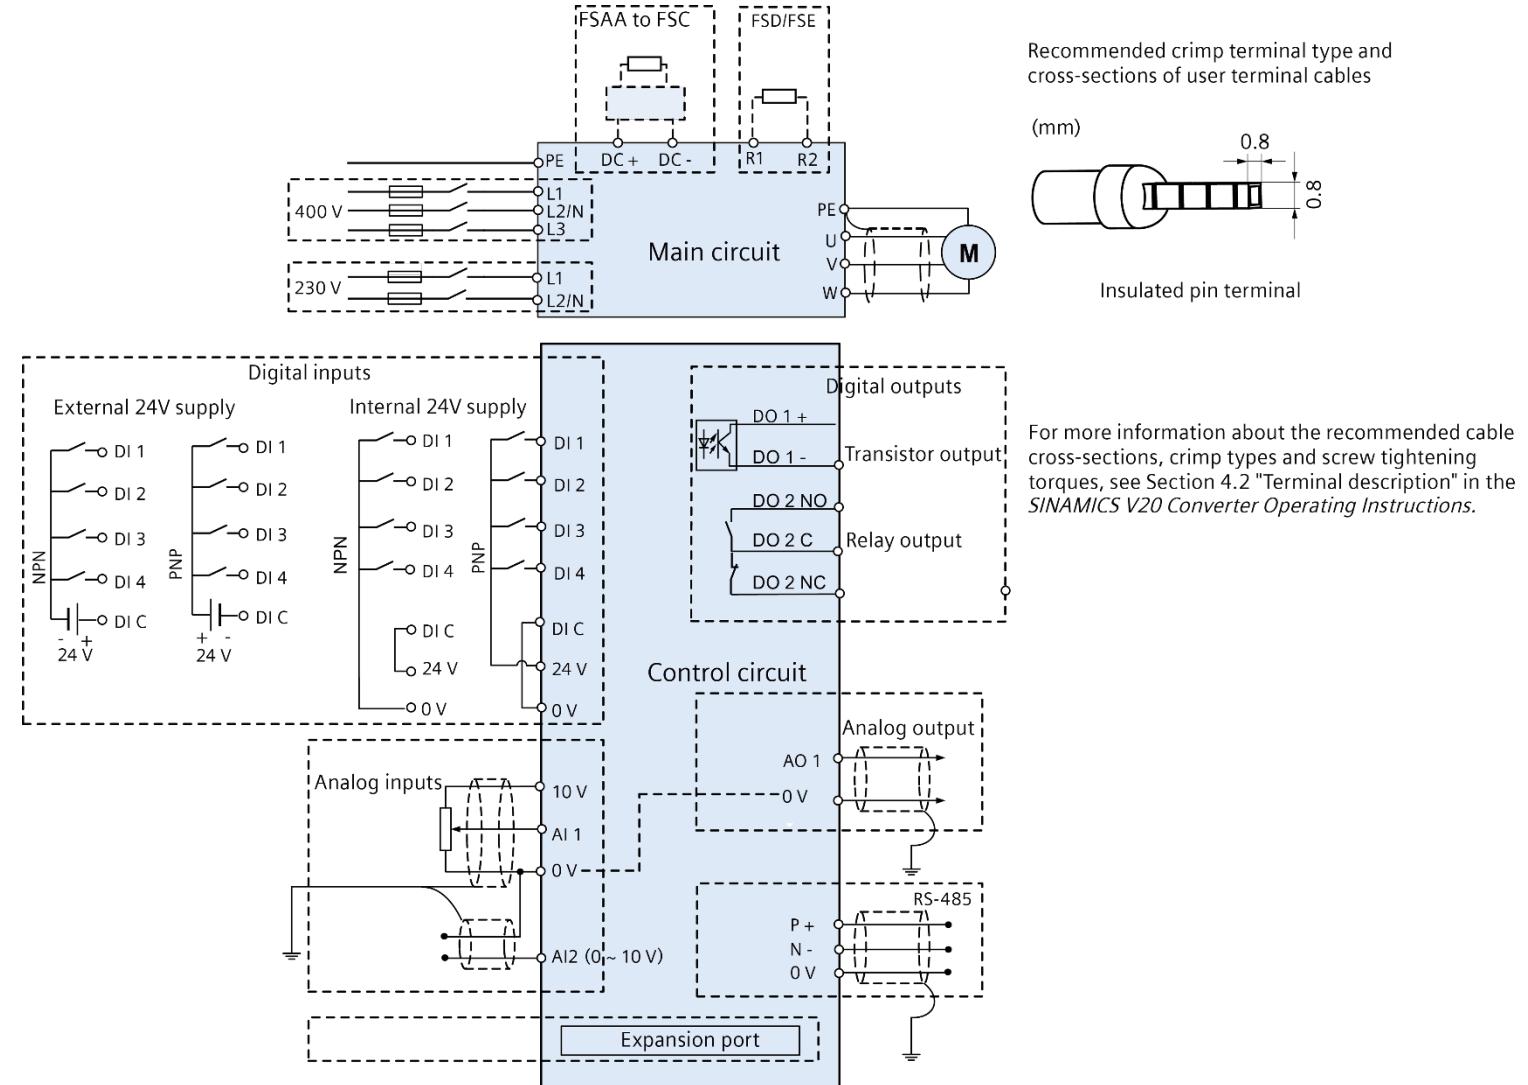

The figure to the right provides a general wiring method for all connection macros in the PNP mode. Both PNP and NPN can be realized with the same parameters. You can switch to the NPN mode by connecting the digital input common (DIC) to 24 V. The signal functions of I/O terminals in different macros may vary except for analog output (AO1), digital output 1 (DO1), and digital output 2 (DO2). For more detailed signal differences, see the following table.
